

SEMFWE3-27 - SQA Unit Code H1VX 04

Developing and marking out templates for metalwork

Overview

This standard identifies the competencies you need for developing and marking out templates prior to cutting and/or shaping the material in accordance with approved procedures. You will be required to select the appropriate materials and equipment to use based on the information presented to you and the accuracy required to be achieved. The templates produced may be used for marking out, setting of fabrications or pipe arrangements or preparing (setting) heavy plate for rolling.

Your responsibilities will require you to comply with organisational policy and procedures for the marking out and template making activities, seeking out relevant information and reporting any problems with the equipment, materials or template making activities that you cannot personally resolve, or are outside your permitted authority, to the relevant people. You will be expected to work with minimum supervision, taking personal responsibility for your own actions and the quality and accuracy of the work that you produce.

Your underpinning knowledge will provide a good understanding of your work, and provide an informed approach to template making. You will understand the marking out and template making process and its application, and will know about the equipment, materials and processes to be carried out in sufficient depth to provide a sound basis for carrying out the activities, correcting faults and producing the templates to the required specification. You will understand the safety precautions required when carrying out the template making activities and when using the associated tools and equipment. You will be required to demonstrate safe working practices throughout, and will understand the responsibility you owe to yourself and others in the workplace.

SEMFWE3-27 - SQA Unit Code H1VX 04

Developing and marking out templates for metalwork

Performance criteria

- You must be able to:*
- P1 work safely at all times, complying with health and safety and other relevant regulations and guidelines
 - P2 obtain and use the correct information for marking out
 - P3 obtain the appropriate marking out equipment and check that it is in a usable condition
 - P4 prepare suitable datums and marking out surfaces
 - P5 mark out using appropriate methods
 - P6 check that the marking out complies with the specification
 - P7 deal promptly and effectively with problems within your control and report those that cannot be resolved

SEMFWE3-27 - SQA Unit Code H1VX 04

Developing and marking out templates for metalwork

Knowledge and understanding

You need to know and understand:

- K1 the specific safety precautions to be taken when working in a fabrication environment with sheet or plate materials (general workshop and site safety, appropriate personal protective equipment (PPE), accident procedure; statutory regulations, risk assessment procedures and COSHH regulations)
- K2 the personal protective clothing and equipment that needs to be worn when carrying out the fabrication activities (such as leather gloves, eye/ear protection, safety helmets)
- K3 the correct methods of moving or lifting sheet or plate materials
- K4 the hazards associated with fabrication work and how they can be minimised (such as handling sheet/fabricated components; using dangerous or badly maintained tools and equipment)
- K5 how to obtain the necessary drawings, template specifications and job instructions
- K6 how to use and extract information from engineering drawings and related specifications (to include symbols and conventions to appropriate British, European or relevant International standards in relation to work undertaken)
- K7 how to interpret first and third angle drawings, imperial and metric systems of measurement, workpiece reference points and system of tolerancing
- K8 principles and techniques for marking out templates
- K9 geometrical methods for developing of complex shapes (such as square to round, lobsterback sections) from sheet metal
- K10 how to produce a three dimensional shape from the two dimensional material
- K11 use of marking out conventions, datum edges/lines and centre lines
- K12 the preparations that need to be carried out on the material prior to marking out to enhance clarity and accuracy, and safety
- K13 the component material characteristics and process considerations that need to be taken into account when marking out templates
- K14 allowances for joint and weld preparations for different materials and thicknesses
- K15 how to calculate true lengths, bend allowances and circumferences
- K16 the effective use and care of tools/instruments
- K17 how to mark out and preserve the template for maximum clarity, accuracy and ease of transfer
- K18 ways of laying out the shapes/patterns to maximise the use of plate or sheet material
- K19 setting and adjusting tools, such as squares and protractors
- K20 how to transfer information to the underside of the sheet or plate

SEMFWE3-27 - SQA Unit Code H1VX 04

Developing and marking out templates for metalwork

- K21 the importance of using tools only for the purpose intended; the care that is required when using the equipment and tools; the proper way of preserving and storing tools and equipment between operations
- K22 the need for clear and dimensional accuracy in marking out to specifications/drawings
- K23 the problems that can occur in marking out templates and how these can be avoided
- K24 the extent of your own responsibility and whom you should report to if you have problems that you cannot resolve

Developing and marking out templates for metalwork

Additional Information

Scope/range related to performance criteria

You must be able to:

1. mark out plate or pipe setting for **two** of the following:
 - 1.1 angular setting
 - 1.2 large radius section
 - 1.3 plate setting
 - 1.4 burner template
2. mark out templates for **six** of the following:
 - 2.1 radiused and mitred corners
 - 2.2 ball corner or spherical section
 - 2.3 concentric cones
 - 2.4 fish plates
 - 2.5 offset cones
 - 2.6 bed plates
 - 2.7 truncated cones
 - 2.8 gusset plates
 - 2.9 square/rectangular to round
 - 2.10 structural components
 - 2.11 fishtail
 - 2.12 simple seating (tank cradles)
 - 2.13 segmented bends (lobsterback)
 - 2.14 box edges
3. use **all** of the following tools and instruments to mark out directly from drawings onto sheetmetal:
 - 3.1 scribe
 - 3.2 square
 - 3.3 centre punch
 - 3.4 protractor
 - 3.5 rule or tape
 - 3.6 dividers or trammels
 - 3.7 straight edge
 - 3.8 chalk, bluing or paint
 - 3.9 laser (where applicable)
4. mark out material to include **all** of the following features:
 - 4.1 datums and centre-lines
 - 4.2 cutting detail and allowances
 - 4.3 square and rectangular profiles
 - 4.4 bend/fold allowances
 - 4.5 angles
 - 4.6 hole centres and outlining (linear)

SEMFWE3-27 - SQA Unit Code H1VX 04

Developing and marking out templates for metalwork

- 4.7 circles and curved profiles
- 4.8 hole centres and outlining (on pitch circles)
- 5. developed templates meet **all** the following quality and accuracy standards:
 - 5.1 template profile complies with drawing or job requirements
 - 5.2 dimensional accuracy meets drawing/specification
 - 5.3 suitably marked or labelled to identify purpose
 - 5.4 marking out uses recognised conventions
